A reading program is used to help guide both initial and differentiated instruction in the regular classroom. It supports instruction in the broad range of reading skills (phonemic awareness, phonics, fluency, vocabulary, comprehension) required to become a skilled reader. It contains teacher’s manuals with explicit lesson plans, and provides reading and practice materials for students.

**Standard Protocol**

- **Standard protocol** intervention relies on the same, empirically validated intervention for all students with similar academic or behavioral needs. Standard protocol interventions facilitate quality control.

- Regular team meetings to discuss groups of students in intervention

- Interventions delivered at regularly scheduled times by regularly appointed staff

- Interventions are from a predetermined vetted list (i.e. protocol)

**Universal screening** is conducted, usually as a first stage within a screening process, to identify or predict students who may be at risk for poor learning outcomes. Universal screening tests are typically brief; conducted with all students at a grade level; and followed by additional testing or short-term progress monitoring to corroborate students’ risk status.

**Intensive academic interventions** are characterized by their increased focus for students who fail to respond to less intensive forms of instruction. Intensity can be increased through many dimensions including length, frequency, and duration of implementation.

**Both**

- **Universal screener** for all students

- Research based **core reading program** with strong instruction

- Evidence Based **intervention**

- **Progress monitoring**

**Response to intervention** integrates assessment and intervention within a multi-level prevention system to maximize student achievement and reduce behavior problems. With RTI, schools identify students at risk for poor learning outcomes, monitor student progress, provide evidence-based interventions and adjust the intensity and nature of those interventions depending on a student’s responsiveness, and identify students with learning disabilities.

**Problem Solving Model**

- Within RTI, a **problem-solving approach** is used to individually tailor an intervention. It typically has four stages: problem identification, problem analysis, plan implementation, and plan evaluation.

- Follow a prescribed cycle for individual students

- Intermittent team meetings to discuss individuals in interventions

- Interventions designed individually for each student

**A reading program** is used to help guide both initial and differentiated instruction in the regular classroom. It supports instruction in the broad range of reading skills (phonemic awareness, phonics, fluency, vocabulary, comprehension) required to become a skilled reader. It contains teacher’s manuals with explicit lesson plans, and provides reading and practice materials for students.

**Progress monitoring** is used to assess students’ academic performance, to quantify a student rate of improvement or responsiveness to instruction, and to evaluate the effectiveness of instruction. Progress monitoring can be implemented with individual students or an entire class.
